(~~170~~)

DIVE: Turn 60° Used the big  
left bag it takes 50 hours to  
to ~~move~~ free left bag.

Very difficult to vent w/out  
putting your fingers in top of  
bag. Relocated Down 4017  
at 98. nice shot.

TO 2/2/99 881

DIVE: TWIN 64'E NOT nearly much better than a single 88 in terms of dive time. Went down with three brackets only used one or two of them were stucked together. Move all of them in garbage bin to drums 15 & 16. Hard work!

Water not too bad. Chain pulled in drums must be generating Ferric Sulphate as an enormous black cloud of something emerges from the bins when tipped up.

Chain dumps now at nos 15 & No 16 S. think need looking up will prove as that to monitor on the high tide when scheduled at 2:00PM D.S.T.

DIVS: 11.8 M. 96 MINUTES  $\frac{96}{977}$

Two 88<sup>15</sup> Chain now fairly complete. Weak links are at (15) - (16) - Turn (14) back to

(13). Span chain left at down

(13) for replacement. New chain also required for part of

(5) back to (4). Would be ideal to measure what chain is now required.

More shackles needed. Order from Smead Section also required for

(12) back to (11)

2/3/99

DIVERS: JOHN ROWE

(171)

Nice long drive. No air bags, so plenty of air. Chan needs fishing at deck front, and from four to five. Bravery lost to measure up and then cut and carry into position. Broken over bonnie. Carry Chan around bonnie to NO13 rather than around tank - less work on environment and Chan. Also pick up old Chan.

LEROY ROWE 172

First dive for Mr. Rowe in a year! diver as he for strap broke and so did not get to diver.

J-14 S measured chain that needs replacing - 100 feet from drums ③, to ④ to ⑤

25' at ①-② needs shackle

taken off with a needle punch

95' from ⑭ ⑮ but not to

16.

Divors: Join row 6.

(173)

~~(175)~~

Moved 3 bunches of chain into position. Needed separate trips for each bunch. Worked a lot of air trying to lift 3 bunches then 2, then one. Connected drum number 15 with the new chain. Used the punch to reconnect chain at no 14

DIVERS: DOTTOR ROWS

Nice long dive. Connected new  
 chain to drum 20 5. And started  
 old chain in with crate at 20  
 5. Brass tag still intact. Reamed  
 down 20 13 to 14. at a lower  
 level, the only being there in 20 4.  
 as much movement so chain  
 showed lat logs. Used spare  
 chain from bucket. Maybe I  
 got the 100' and 105' chain mixed  
 up. A lot of stuffing around at  
 20 (14) - had to remove 4  
 old shackles. Took forever.  
 Old chain dump at both  
 (13), (14). I think we should  
 clear the old chain.
